

# User Responsibilities Procedure

The background of the lower half of the page features a photograph of a modern glass skyscraper, likely the Willis Tower in Chicago, with other city buildings visible in the distance. The image is partially obscured by large, stylized orange and blue geometric shapes that sweep across the page.

## **1. Objective**

The objective of this document is to ensure that Information Asset users are aware of their responsibilities for maintaining effective access controls particularly regarding the use of password and security of user equipment.

## **2. Scope**

This document is applicable to all users of information assets at Trianz.

## **3. Responsibilities**

### **3.1 Password Use**

- Users shall be issued with a unique user ID and initial password to logon to the local system.
- At the time of the first login, the user shall change the password as per the password rules given below.
- The password must have alphanumeric characters and be non-dictionary. It must consist of a minimum of 8 characters.
- Password shall be a mix of uppercase alphabets, lowercase alphabets, numbers and/or some special characters.
- Password must be changed as per Password Security Policy.
- The user shall not share individual user passwords to any other users.

### **3.2 Clear desk and Clear Screen**

- The employees will lock away all confidential and valuable documents (paper and magnetic) in cabinets or desk drawers (as appropriate) when the desk is unattended for an extended period – for example when away for meetings, at lunch times, or overnight.
- All wastepaper, which has any information or data on, must be placed in the confidential waste shredding bins located in each area. Under no circumstances should this type of wastepaper be thrown away with normal rubbish in the bins under each desk or the unclassified paper recycling bins.

- Personal computers and computer terminals and printers should not be left logged on when unattended and should be protected by key locks, passwords, or other controls when not in use.
- The employees will lock the PCs, when away from the desk using “Ctrl + Alt + Delete” and will log off computers and laptops when unattended. The password –protected screensaver can be invoked and at cease of work, the employee will close all the applications and log off/shutdown the workstation/laptop and lock the laptop away or secure it through the use of a cable lock.
- All PCs, Laptops and workstations will be secured with a password-protected screensaver with the automatic activation feature set at 10 minutes.
- The employees shall not store any video/audio/games etc on their computers.
- Incoming and outgoing mail points and unattended fax should be protected.
- Photocopiers should be locked (or protected from unauthorized use in some other way) outside normal working hours.
- 
- The following guidelines should be applied:
  - The users should not store confidential information on the personal computers. File servers should be used to store confidential information since appropriate access restriction can be applied for such confidential data. Availability of information is also ensured by regular backup at the server level
  - Sensitive or classified information, when printed, should be cleared from printers immediately.
  - The user should immediately collect the printouts from the network printers. The user should check the contents of the printout for completeness. In case the printing is incomplete and the user does not wish to continue printing, then he/she should press the ‘Cancel Job’ button to cancel the current print job. In case the job is not canceled

even after pressing the button (it may happen) then he/she should contact Facilities immediately.

- Every employee should make sure that there is no document kept in his/her desktop, before handing over the keys of the desk cabinet to administration department. Administration department hold no responsibility of any document kept inside the desk and if any document is found in the desk, it will be shredded without any prior approval.
- The following control measures should be undertaken by the users to secure their personal computers from unauthorized access:
- Users should terminate their logon session if they are leaving the computer unattended for long duration.
- Power on passwords should be used to prevent unauthorized booting of the computer
- Hard disk of the personal computer should not be shared. If in case sharing is required, then specific folder should be shared by using a sharing password.
- Standard screensaver and wallpaper supplied by the organization should be used in the organization.
- The users are not permitted to change the display settings set by the IT Team.
- For Cloud services, it is the responsibility of the administrator/user assigned to manage a specific cloud instance/virtual machine with above stated security measures where applicable.

## 4. Security and Data Privacy Role – Delivery

<b>Ensure Compliance to Infosec Policies and Procedures</b>
<b>Ensure Compliance to Data Privacy Policies and Procedures</b>
<b>Ensures compliance to Client Specified Security Controls as defined in MSA and SOW</b>
